

# Lorenz curves for Norway 1875-2017

*Online appendix to: "Estimating long-run income inequality from mixed tabular data: Empirical evidence from Norway, 1875-2017" by Aaberge, Atkinson and Modalsli.*

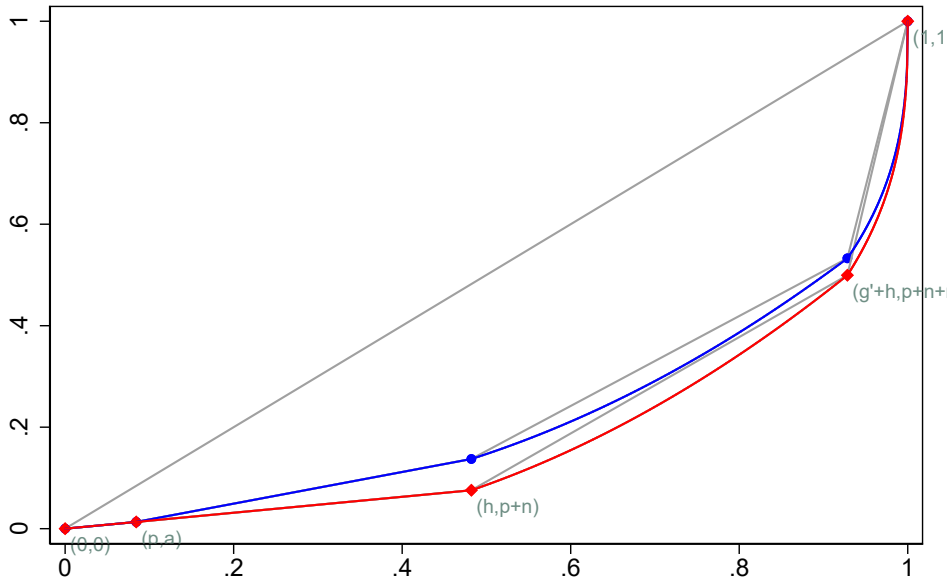

- ▶ In each figure the horizontal axis shows the proportion of the population and the vertical axis shows the proportion of total gross income. The lower line corresponds to the upper bound Gini coefficient while the upper line corresponds to the lower bound Gini coefficient.
- ▶ See paper for population and income definitions.
- ▶ No curves are drawn for 1876-1887, 1889-1891, and 1956.
- ▶ This version: September 20, 2019
